## Open Pit

**MTi GROUP** bring to you the latest in solutions for drill and blast. The **NEW BlastBall™** hole blocker is revolutionary in product design and now **MTi Group** provide numerous turnkey solutions to make the use of the **BlastBall** and **Aero** products easy and hassle free. With extensive **Open Pit** experience, **MTi Group** have engineered several durable inflation options to allow the you to utilise all the advantages and benefits of the **BlastBall™** and **Aero** products.

### Hand Inflator w. Dropline (part #: SM-I-1)

The hand inflator can be used in both underground and pit applications. Used predominantly for plugging holes and stemming support the length of the drop line can be customized from 10' (3m) to 50' (15m) depending on requirements. The only prerequisite for this solution is air from a nearby source such as an explosive truck or drill rig. MTi is also experienced in designing solutions to suit any site requirement.

### Spring Return Reel (part #: OP-I-20)

Designed to be a permanent fixture on any drill rig or explosives truck, the industry compliant spring return hose reel comes with 65' (20m) of durable inflation hose (15'/30'/50' extensions available on request). Complete with MTi's universal couplings, the reel can be manipulated to suit many different techniques for loading BlastBalls or Aero products efficiently. This type of arrangement is advantageous when decking, plugging collars, stemming support and void management.

### Portable DC Inflation Skid (part #: OP-I-P/DC)

MTi's complete solution to enable trouble free operation of the BlastBall or Aero products; the DC skid connects straight into an Anderson socket on any utility vehicle and will run continuously all shift. This setup is a turn key system that exploits all the advantages of the BlastBall plugs from decking to underwater inflation. The DC skid can be tailored to suit any blasting arena, with a tare weight of approximately 120lb (50kg) the unit can be moved to any mobile plant. The easiest solution for any challenging site. **MTi can also arrange for a skilled team member to install plugs in up to 200' (60m) water submergence in holes up to 13" (350mm). Call us for more information.**
