

# BlastBag Aero

In 2008 MTi BlastBag™ Aero plugs took on a new form to become a more reliable robust and easier to use product for Air operated blast hole plugging. The fully patented product allows D&B personnel to improve techniques and ultimately save money due to improved fragmentation and better utilisation of explosive energy.

## Advantages

The NEW BlastBag™ Aero from MTi is the first of its kind. Designed with underground applications in mind, the BlastBag plug is the most versatile product type on the market.

Consisting of an airtight bladder system, a resilient outer protective coating (also clearly displays all relevant information pertaining to use and safety) and a high flow quick connect coupling, the BlastBag Aero is as easy to use as it is reliable.

The dual bladder construction and positive valve sealing mechanism ensures that leakage doesn't occur when shots are left to sleep. The NEW valve incorporates a schrader valve for reliability and an annular snap coupling for fast and easy connection.

This patented valve arrangement connects to a durable Stainless Steel coupling which is interchangeable with other MTi products such as the HoleSave plug and the BlastBall plug.

Improve fragmentation, obtain a SAFER final wall, dig easier, eliminate explosive wastage, control void management, block off breakthroughs quick and effectively, protect drilled holes and utilise the charge through function for underground upholes are just a few applications where the BlastBag Aero can be used with excellent results.

## Use

Available in all sizes, MTi will have a solution for your mine no matter what the conditions or the requirements. You can be guaranteed MTi will be able to recommend a method for use that will ultimately improve your sites D&B programme.

Don't let an air source be a concern for you, MTi have engineered several custom solutions for your site pick up, your explosive truck, your underground drives or your drill rig. No matter what plant, fixed or mobile, MTi GROUP have a turn key or minimal fuss system waiting. Sporting 'in house' engineering and design our personnel are ready to work with you if a custom solution is required.

MTi Group also have a solution for underwater plugging at depths up to 200' (60m). Contact us for more information.

## Guarantee

MTi GROUP are so confident with the BlastBag Aero that they offer a full refund if the product does not perform.

## Product Table

Part Number	Hole to Suit	Box
QUOKKA-AERO	3 - 5" hole (76 - 115mm)	50
KOALO-AERO	4 - 8" hole (102 - 203mm)	40
PLATYPUS-AERO	4 - 10" hole (102 - 250mm)	40
WOMBAT-AERO	4 - 12" hole (102 - 290mm)	35
EMU-AERO	4 - 13" hole (102 - 350mm)	35
